Dear Hiring Manager,

I am excited to apply for the Product Designer role at Microsoft. With 3+ years of experience in UI/UX design, front-end development, and user-centric problem-solving, I specialize in crafting seamless digital experiences that drive engagement and conversions. My expertise in UI/UX, HTML, CSS, and React allows me to bridge the gap between design and development, ensuring visually compelling and highly functional products.

At MyDeziner, I led the design of an innovative interior design tool, implementing features like instant material swapping, custom 3D modeling, and real-time quotations—enhancing both usability and efficiency. Additionally, I played a key role in optimizing CustomFurnish.com, improving engagement and conversions through meticulous UX refinements and data-driven design strategies.

What draws me to Microsoft is its commitment to innovation and user-first solutions. I thrive in environments where design meets technology, creating products that not only look great but also enhance productivity and accessibility. My approach—deep research, wireframing, high-fidelity prototyping, usability testing, and seamless handoff to development—aligns with Microsoft's design philosophy of crafting intuitive and scalable experiences.

I would love the opportunity to contribute my skills to Microsoft’s mission of empowering every individual and organization through technology-driven design. I look forward to the possibility of discussing how my experience and passion align with your team’s goals. Let’s create something extraordinary.

Best regards,

Sai Chittala
